

Preserving Life and Transforming Power in Gaza

A diagnostic framework for accountable transition and the protection of living possibilities.

*“Protect living possibilities. Make evidence consequential.
Keep power answerable.”*

Based on the research of Bichara Sahely, MD.

The Paradox of Unanswered Harm

The Material Disconnection

Step 1: The clinician knows the required treatment (e.g., surgical materials, anaesthetics).

Step 2: Materials are physically blocked by external permit or border jurisdiction.

Outcome: The consequence belongs to the patient's body; the decision sits in an unreachable technical system.

The Epistemic Disconnection

Step 1: The investigator establishes empirical findings of severe harm.

Step 2: Evidence is blocked by institutional capture and unanswerable authority.

Outcome: People describe what is happening to them without obtaining a consequential hearing or route to implementation.

The Investigative Record (The Symptoms)

ICC Findings (Nov 2024):
Reasonable grounds that
authorities intentionally
deprived civilian population
of indispensable goods.
Aid increases found to be
frequently conditional.

COI Findings (Jun/Sept 2025):
Conclusions of total siege as
collective punishment,
strategic use of life-sustaining
necessities, and deliberate
targeting of children.

**Core Question: How can extensive knowledge
of injury coexist with institutions capable of
sustaining the conduct that produces it?**

Institutional Continuity

Governing arrangements successfully reproduce their authority, supply relationships, and public justifications while families lose homes and children lose care.

Domain 1: Material Control

Reproductive Life & Clinical Continuity

Interrupted pregnancy and post-partum care; women's marginalization from decision-making.

"The capability to care is relational. A hospital building is not the causal unit of care; the relationship among skilled people, materials, energy, and information is."

Water & Ecological Recovery

Water deprivation amounting to extermination. A funded shipment that cannot enter leaves the protective chain incomplete.

Children's Development & Collective Continuity

The loss of learning time and cultural heritage. An attack on childhood is an attack on a people's capacity to self-determine their future.

Domain 2: Epistemic Control

Clock Tower X:

FARA filings disclose \$1.5M/month budget for deployment of websites and content to deliver GPT framing results.

The Manufacturing Process (Raw Inputs)

VIGINUM (Rokh Solis Network):

Inauthentic coordinated networks simulating opposed political identities.

The Mechanism: Provenance Laundering

Sponsored accounts and AI-optimized framing enter the ecosystem. The sponsorship disappears as it moves through credible intermediaries.

Manufactured Corroboration

When a chatbot summarizes the data without provenance, the reader receives the appearance of independent analysis. Disagreement is no longer answerable to evidence, but to hidden sponsorship.

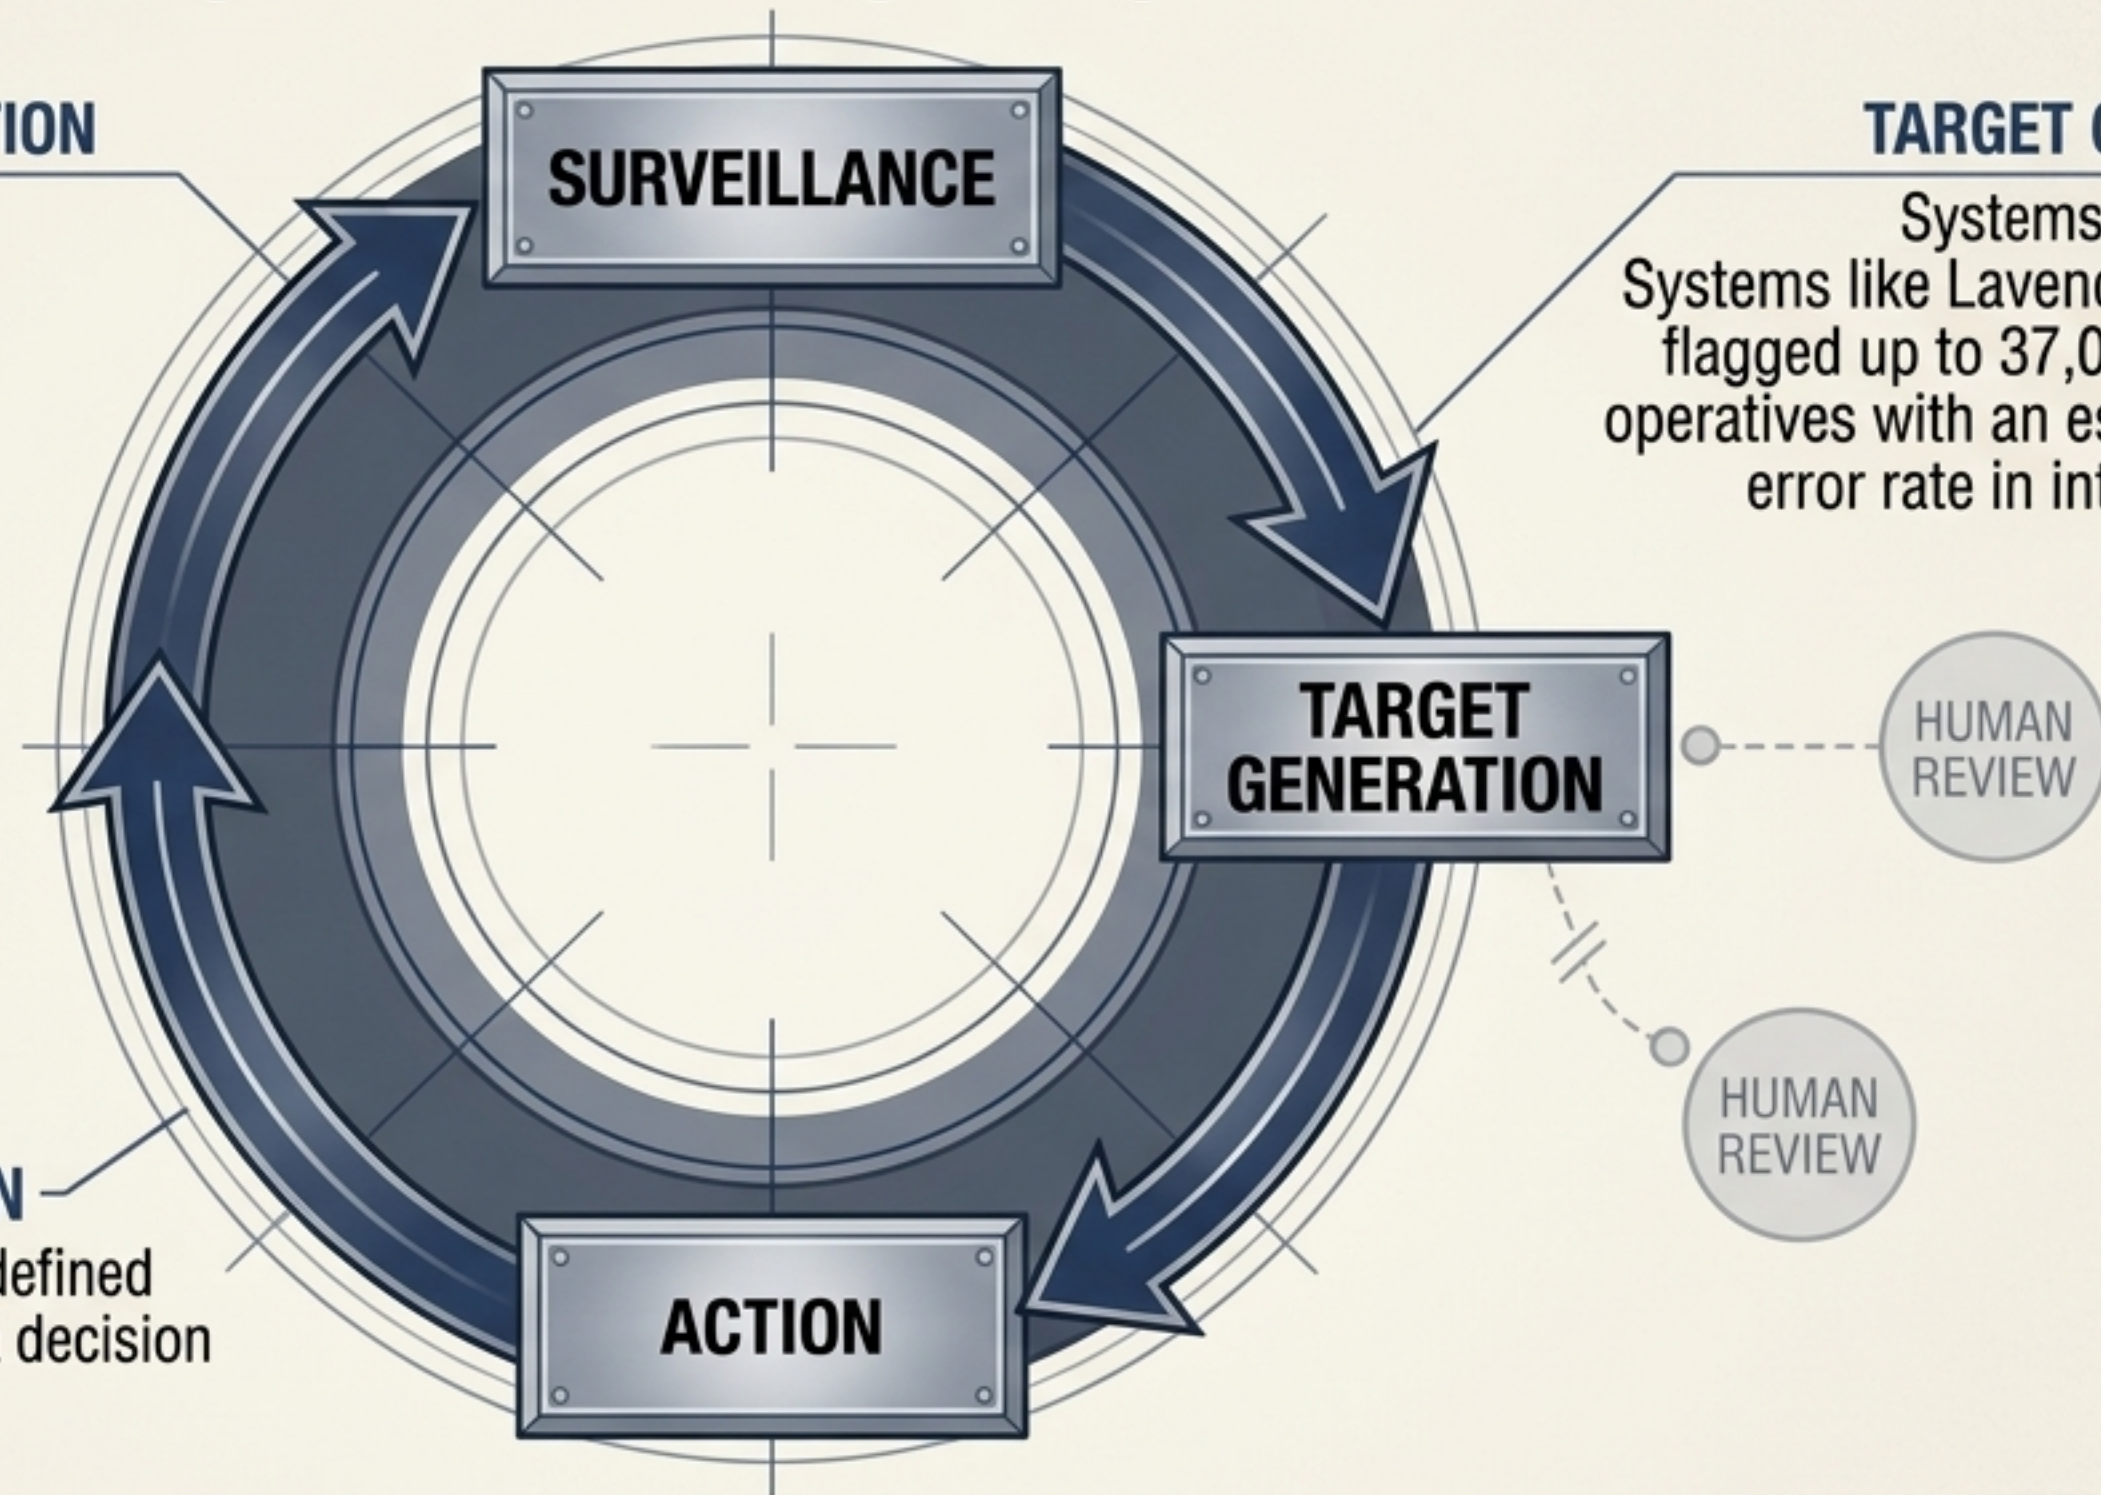

Algorithmic Targeting Loop

SURVEILLANCE IS NOT RECOGNITION

Populations are legible to targeting databases for extraction, but lack the universal standing to contest their categorization.

CONFIGURATION OF PROTECTION

Targeting-support tools feature user-defined constraints. But an audit trail makes a decision traceable without making it lawful.

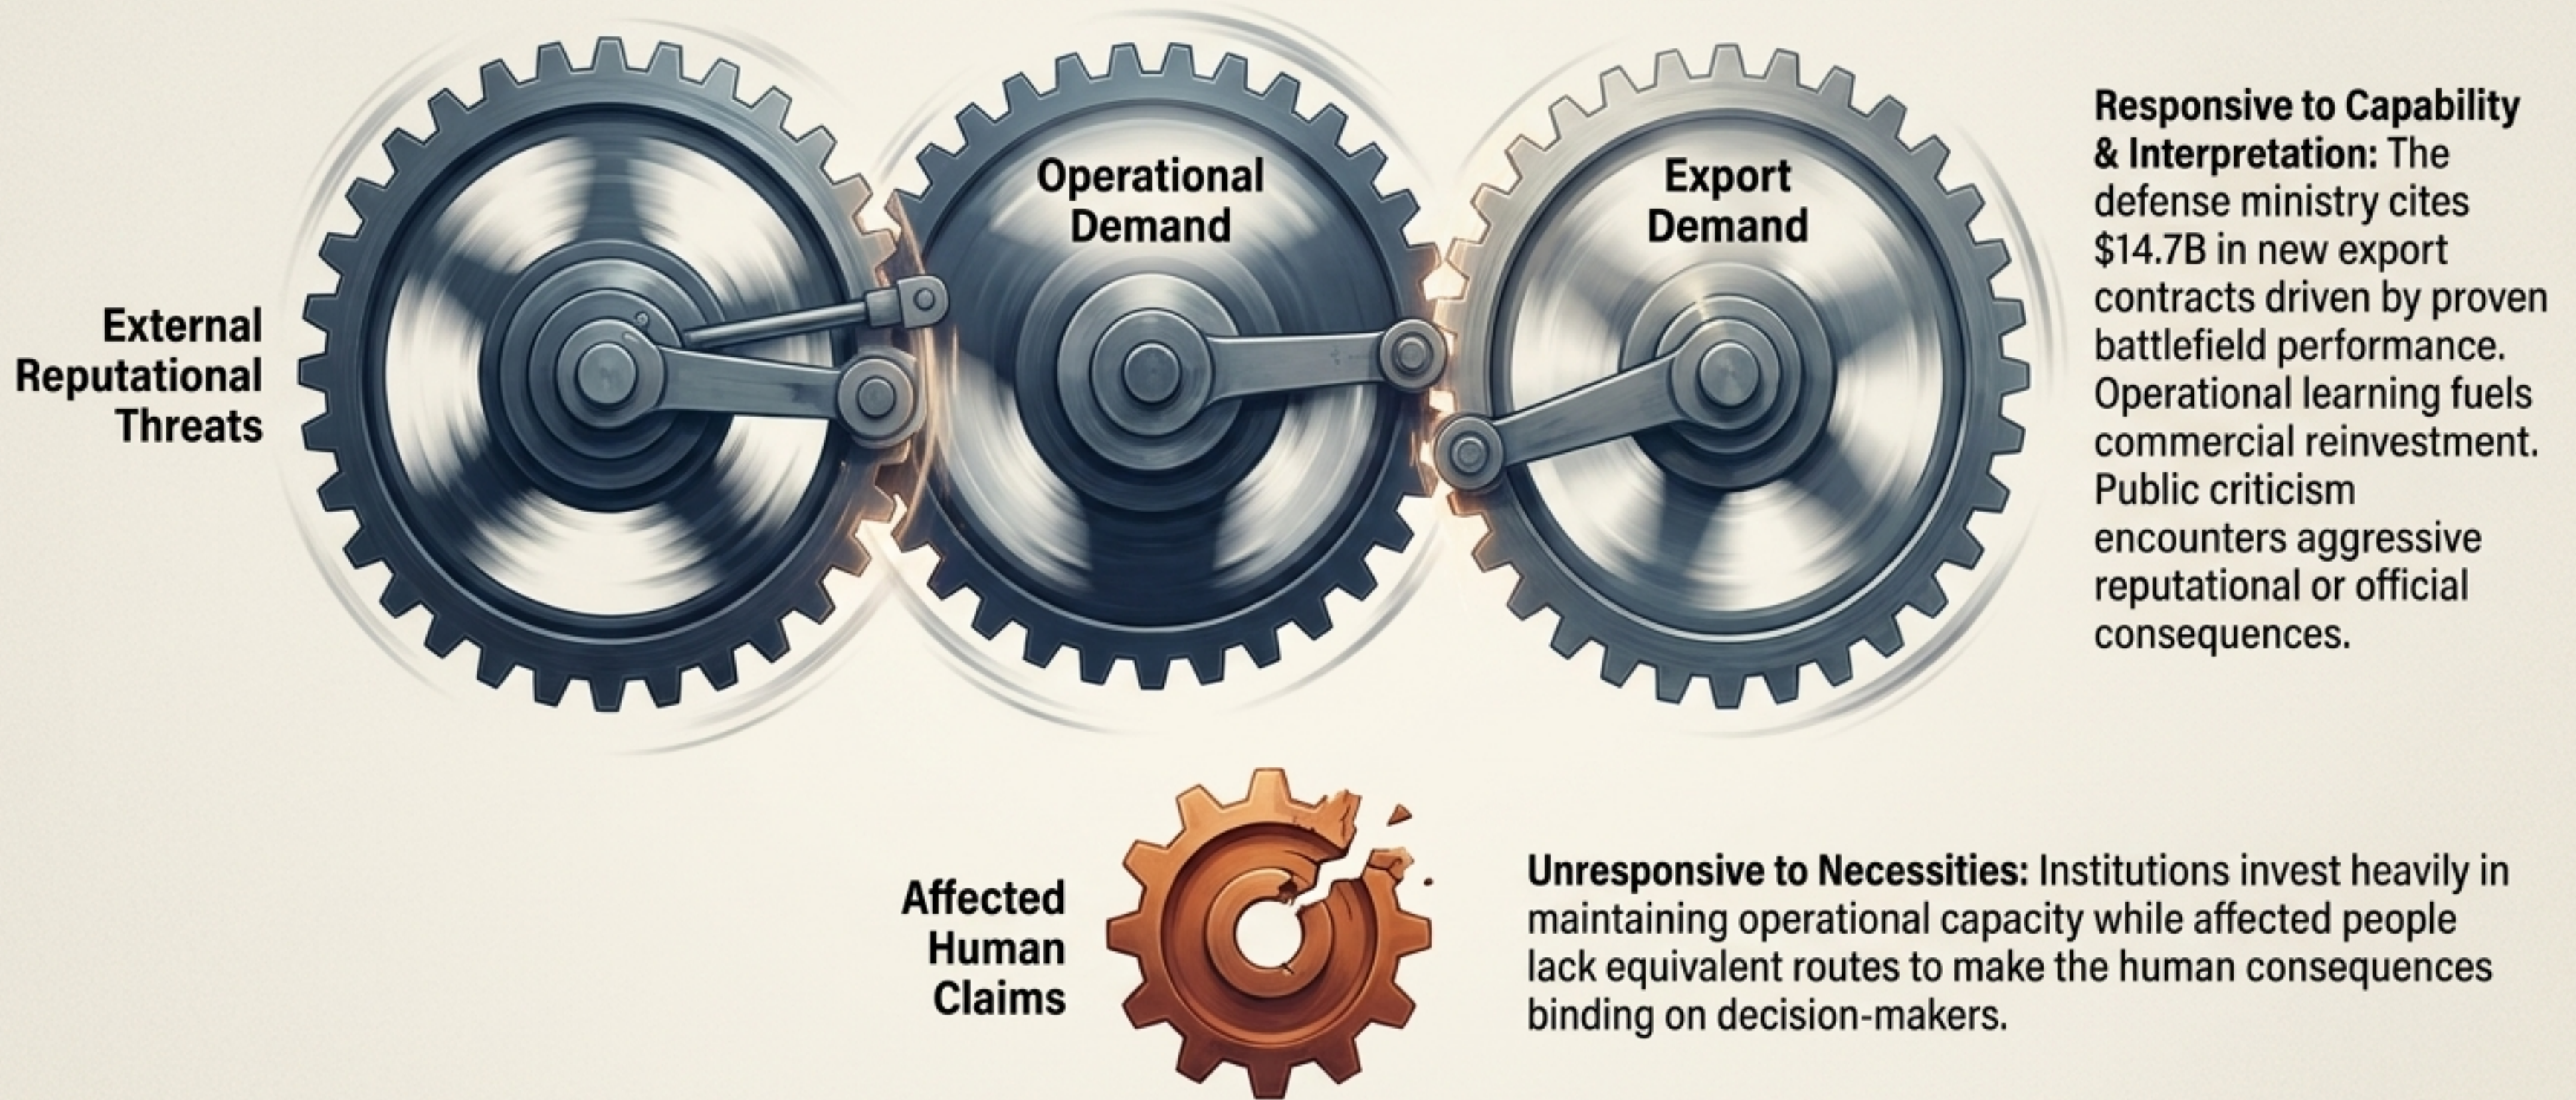

TARGET GENERATION

Systems like Lavender
Systems like Lavender reportedly flagged up to 37,000 suspected operatives with an estimated 10% error rate in internal checks.

THE DIAGNOSTIC INSIGHT: A system can adapt technically (learning to strike more efficiently) while actively excluding evidence that its governing purposes are unlawful and should change.

The Diagnosis: Selective Institutional Responsiveness

The persistence of devastation is not a logistical failure; it is a highly coordinated success of selective responsiveness.

The Capture of Correction

An institutional arrangement reaches its most pathological state when those implicated in conduct possess enough control over evidence, review, or implementation to disable an effective remedy.

Sanctioning the Investigators

In September 2025, the US Treasury (OFAC) listed investigative organizations including Al-Haq, Al Mezan, and PCHR under its ICC-related sanctions program.

Advocacy Against Accountability

AIPAC explicitly pushed the Illegitimate Court Counteraction Act to impose asset freezes and visa restrictions on the ICC.

The Result: The official acts affect organizations investigating harm. The institutions of correction become targets, transforming accountability from a legal right into a perilous political battle.

Transforming Power: The Status Quo vs. Life-Value Matrix

Domain	The Status Quo	Life-Value Paradigm
Domain 1: Information	Fabricated provenance, PR funnels, and AI laundering.	The Epistemic Commons; transparent, contestable public knowledge.
Domain 2: Surveillance	Being legible to a targeting database for extraction or control.	Recognition; having the universal standing to contest your categorization as a legitimate other.
Domain 3: AI & Technology	Technical Adaptation; learning to execute operations more efficiently.	Goal Correction; incorporating evidence that the objective itself is unlawful.
Domain 4: Aid & Provision	Conditional Provision; basic needs used as political and military leverage.	Binding Social Floors; material aid treated as an irreducible human right.

Prevention is Not Postponed Until Punishment

Accountability Timeline

The Window for Protection

The Window for Retrospective Justice

Irreversible Loss
(Death, Developmental Damage)

1

The Legal Reality

ICJ and ICC jurisprudence establishes that a preventive duty arises when a state knows of a serious risk and possesses means to intervene. A final criminal conviction is not the starting condition for a protective response.

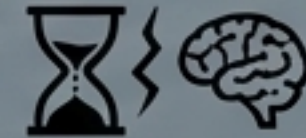

2

The Operational Reality

An effective remedy must operate within the remaining protective window.

3

The Developmental Reality

Later acknowledgment, compensation, or prosecution cannot retrospectively supply an earlier missed medical treatment or restore an indispensable opportunity for childhood learning.

The Incomplete Substitute Diagnostic

Identifying when institutions fake accountability by bypassing human outcomes

GENUINE REQUIREMENT	INCOMPLETE SUBSTITUTE
CLAIM AND STANDING	
The affected person's account and means of contesting the framing	A provider's category that the person described cannot question
ACTION AND RESOURCES	
Who must act, with suitable supplies, payment authority, and fallbacks	A referral without an accepting institution, or a pledge that cannot become provision
REVIEW AND ENFORCEMENT	
Independent access to evidence and a competent route to implementation	A hearing, apology, or approval without an effective consequence
OUTCOME AND RECURRENCE	
Verified access, clinical continuity, and successor answerability	An institution declaring success while arbitrary dependence and exclusion persist

The Leverage Depth Chart

Level 1: Parameters & Buffers (The Surface)

Adjusting budgets, aid amounts, or eligibility.

Test: Does the excluded person actually receive reliable access, or does the aggregate metric just look better?

Level 2: Information Flows & Rules (The Mid-Depths)

Surveillance opacity vs. provenance. Sanctions vs. duties.

Test: Can the rule be enforced against an influential participant, not only a weaker one?

Level 3: Goals & Self-Organization (The Deep)

Institutional continuity replacing protective purpose.

Test: Can Palestinians define priorities and retain protection while dissenting from externally chosen representatives?

Level 4: Paradigms (The Bedrock)

People treated as instruments subordinate to institutional necessity.

Test: Can affected experience reopen the model through which the institution describes people? Can they reject the account entirely?

Protecting Now: Bounded Changes in Capability

The Clinical Blueprint

The Living Network

Public Health Access (Polio Protection)

In Sept 2024, 558,963 children were vaccinated. This relied on Palestinian health institutions, international partners, and negotiated pauses.

It proves that protection can happen through professional competence, even as conflict persists.

Corporate Accountability (Microsoft)

In Sept 2025, Microsoft disabled specified cloud-storage and AI services to an Israeli defense ministry unit following investigative reporting.

It proves that external evidence can change a declared service relationship and interrupt specific capabilities.

The Principle: A change in governance must preserve essential capabilities (like the water-power-health nexus) without guaranteeing every inherited contract or discretionary power.

Restraint of the Successor

- **Metanoia (The Paradigm Shift):** Evidence and affected people's claims must be allowed to reopen what the institution is trying to preserve.
- **Wu-Wei (Non-Domination):** Enabling agency requires the lawful constraint of harmful conduct, so that no successor can make its own permanence the condition of everyone else's security.
- **The Mandate:** A child cannot wait for a completed theory. A patient cannot be treated with a promise. Make evidence consequential without sacrificing the people it describes.

To transform power is to change what recognition can require... to make the arrangements shaping life answerable to the people living within them.
